

Pressure and
Temperature Measurement

More flexible on-site service thanks to a third calibration van

Klingenberg, February 2009.

WIKA has brought a third calibration van into service. The company has reacted to the growing demands on its on-site service for the testing of pressure and temperature measuring instruments.

The three WIKA calibration vans are all fitted out with the same comprehensive technical equipment. Thus the accuracy of all possible measuring points can be controlled, if necessary maintained and readjusted directly and time-efficiently at the customer's. Any required DKD certificates or 3.1 acceptance test certificates can be printed immediately following the calibration.

More and more companies are using the mobile calibration service, since there is no organisational overhead associated with it. A call to set up the appointment is all that's needed. The WIKA vehicles are in use all across Germany.

As well as the calibration vans, WIKA can also offer their service in the pressure and temperature laboratory, at the company headquarters in Klingenberg, for the testing of measuring instruments. Over and above this, the company offers calibration training courses.
